

Concrete Sealers are **NOT** created equal.

US vs THEM

Protect your concrete the right way

- Our Dual Penetrating System Penetrates concrete
- Bonds with and strengthens concrete below the surface
- Protects against spalling
- Creates a permanent internal barrier that waterproofs concrete and keeps moisture out.
- Provides a surface repellent

Sealing the wrong way

- Does not penetrate or strengthen concrete
- It simply sits on the surface of the concrete
- Wears unevenly leaving patchy areas
- Does not protect against spalling
- **Inexpensive to install but cost the home owner more in future concrete repairs**
